WHAT IS TOP FILM ?

Adjuvant for Rainfastness

TopFilm(TM) is currently being used by major nurseries, water districts, golf courses, theme parks, specialty crop growers and vegetation managers in Florida, Texas, the Mid South and Puerto Rico.

Growers and applicators are reporting benefits and cost savings by using TopFilm(TM)'s "rainfastness property" with their treatments. The patented micro-sponge system of TopFilm(TM) reduces wash-off and dilution of applied products.

TOP FILM MAXIMIZES THE PERFORMANCE OF YOUR TREATMENTS WHEN USED AS AN ADJUVANT FOR HERBICIDES, FUNGICIDES AND INSECTICIDES.

Satisfied customers have noticed that the rainfastness property coats the treatment uniformly without damaging delicate foliage (the micro-sponge system does not clog the stoma allowing normal plant transpiration).

Reduced wash off or rainfastness means treatments are not wasted in run-off. This saves on chemical costs, application and spray frequency.

Reports from applicators in various states show that TopFilm(TM):

- Reduces spraying frequency
- Coats foliage uniformly
- Provides safety, no phytotoxicity from adjuvant/surfactant
- Maximizes treatments

WHEN YOU USE TOP FILM THERE IS NO NEED TO ADD OTHER ADJUVANTS OR SURFACTANTS.
